SAFETY DATA SHEET

1. IDENTIFICATION

Product Identifier: HALOTRON® II
Synonyms: HFC Blend B
Product Code: REACH Pre-Registration 05-2114306634-55-0000
SDS compliant with regulations: (EC) No 1907/2006 (REACH), (EC) No 1272/2008 (CLP)
Manufacturer / Supplier: American Pacific, Halotron
Address: 10622 West 6400 North, Cedar City, UT 84721
Telephone: +1 (435) 865-5000 Fax: +1 (435)-865-5005
Emergency Contact: CHEMTREC
Customer Number: CCN721187 US Tel: 1 (800) 424-9300
Intl Tel: +1 (703) 741-5970

Product Use: Halotron® II is a clean fire-extinguishing agent for flooding applications. NFPA 2001, “Standard on Clean Agent Fire Extinguishing Systems” defines a “Clean Agent” to be “electrically non-conducting, volatile, or gaseous fire extinguishant that does not leave a residue upon evaporation.” Halotron® II is a safe, effective, environmentally acceptable clean agent. It is discharged as a gas (i.e. it is volatile). It is a proprietary three component chemical blend based on HCFC-134a for commercial/industrial, military, and maritime use in certain total flooding applications as a substitute for halon 1301 (bromotrifluoromethane or "BTF").

2 HAZARDS IDENTIFICATION

Hazard Classification:
Gases under pressure – Liquefied gas

Pictogram

Signal word: Warning

Physical Hazard:
H280: Contains gas under pressure; may explode if heated

Health Hazard:
Not Classified

Precautionary Statements:
None listed

OSHA Hazard Communication Standard: This product is considered hazardous under the OSHA Hazard Communication Standard

4 FIRST AID MEASURES

As a general rule, in case of doubt or if symptoms persist, always call a physician. As with any chemical, dose and exposure are critically important variables to understand any potential treatment. Short-term exposure to high concentrations may result in central nervous system and cardiac effects.
Routes of exposure | Signs and symptoms of exposure: | Emergency and first aid procedures:
--- | --- | ---
Skin: | At room temperature, vapors will have little or no effect on the skin. However, the liquid may freeze the skin causing frostbite. | If frostbite occurs, seek medical attention immediately. Contact a physician if irritation occurs.
Inhalation: | Significant exposure may cause central nervous system effects such as dizziness, drowsiness, anesthesia, or unconsciousness. At concentrations of 7.5% (v/v) or higher, HCFC-134a may cause increased sensitivity of the heart to adrenaline which might cause irregular heartbeats and possibly ventricular fibrillation or death. | If experiencing breathing difficulties, move to fresh air. Apply artificial respiration if necessary. Never give anything by mouth to an unconscious person. Contact a physician if breathing difficulties occur.
Ingestion: | Not likely to occur in industrial use. Highly volatile. | Do not induce vomiting; Give two glasses of water. Contact a physician.
Eyes: | Vapors will have little or no effect on the eyes. However, liquid may freeze the eyes causing frostbite. | Flush eyes with fresh tepid water. Contact a physician immediately.

**Description of the most important symptoms or effects:** Gross overexposure may cause central nervous system effects such as dizziness, confusion, physical incoordination, drowsiness, anesthesia, or unconsciousness. At concentrations of 7.5% (v/v) or higher, based on data for the major component, HFC-134a may cause increased sensitivity of the heart to adrenaline which might cause irregular heartbeats and possibly ventricular fibrillation or death.

**Note to physician:** This material may make the heart more susceptible to arrhythmias. Catecholamines such as adrenaline, and other compounds having similar effects, should be reserved for emergencies and then used only with special caution.

### 5. FIRE FIGHTING MEASURES

**Flammable Properties:** Flash Point: None
Flash Point Method: Not applicable.
Auto-ignition Temperature: > 743°F (1,369°C) based on the primary component

**Extinguishing Media:** As needed for any surrounding combustible material. The properties of this chemical make it an ideal extinguishing media itself.

**Special Fire Fighting Procedures:** In the case of a fire involving a bulk tank of the material, ensure that the area where the fire occurred is well ventilated before re-entering. Wear protective clothing, including a Self-Contained Breathing Apparatus (SCBA), if large amounts are present. Use water spray or fog to cool storage containers to help prevent an uncontrolled pressure release of bulk tanks, if applicable.

**Unusual Fire and Explosion Hazards:** The concentrated agent when applied to fire can produce toxic by-products specifically hydrogen halides, which can cause damage. Avoid inhalation of these materials by evacuating and ventilating the area. This material should not be mixed with air or pure oxygen under pressure for leak testing or any other purpose.

### 6. ACCIDENTAL RELEASE MEASURES

**In Case of Spill or Other Release:** In the event of a spill (liquid will accumulate only in very low temperature environments; boiling point for Halotron® II is -14.9°F [-26.1°C]), allow for adequate ventilation, and do not re-enter an area without an SCBA until adequate ventilation (less than 5% concentration of Halotron® II) is accomplished.

For spills that might result in overexposure, evacuate the area and use protective gear and SCBA’s.

Do not expose storage containers to radiant heat sources such as fire, as uncontrolled pressure releases may result from high temperatures.

Recommended 1 Hr. Emergency Exposure Limit: 1000 ppm (v/v)

### 7. HANDLING AND STORAGE

**Normal Handling:** (See section 8 for recommended personal protective equipment.) Avoid prolonged contact with the skin and eyes. Avoid inhaling material and ensure that good ventilation is present when handling. Wash after handling and follow good personal hygiene and good housekeeping practices. Keep containers closed and transfer
material using closed systems. Handle in a manner to minimize releases.

Additional Note: Approved US DOT shipping containers are a normal safe method of storage. Containers should be maintained in good condition. Do not allow material to remain in deteriorating containers. Because this product can volatilize, special care should be taken for over pressurization hazards if the containers are overheated or near a radiant heat source. Protective shoes, such as steel-toed shoes, should be worn in addition to the other specified personal protective equipment (PPE) when handling bulk containers. Eye protection with splash protective side shields should be used when any possibility of splash or spray exists.

8. EXPOSURE CONTROLS/PERSONAL PROTECTION

Engineering Controls: Ventilate as necessary to minimize exposure levels. Inspect and clean ventilation systems regularly. Prolonged use should occur only in areas with adequate ventilation. Keep storage containers tightly closed. Vapors are heavier than air posing a potential hazard if large volumes are trapped in enclosed or low places.

Personal Protective Equipment: Wear protective clothing when handling a leak in a storage container (does not apply to fire protection equipment servicing, other than safety goggles and gloves). Neoprene, PVC or PVA gloves should be worn when handling material for prolonged periods. Respiratory protection is not normally needed. However, if handled in enclosed spaces where applicable exposure limits might be exceeded, a Self Contained Breathing Apparatus (SCBA) should be used.

When performing filling or servicing operations, PERFORM THESE ACTIVITIES IN A WELL-VENTILATED AREA.

Time Weighted Exposure Limits: (For persons regularly exposed to material)

Occupational exposure limits have not been established for the blended material.

Workplace Environmental Exposure Level, WEEL (AIHA) (8 hrs.) for the primary component, HFC-134a: 1000 ppm (v/v)
Worksplace Environmental Exposure Level, WEEL (AIHA) (8 hrs.) for HFC-125: 1000 ppm (v/v)

9. PHYSICAL AND CHEMICAL PROPERTIES

| Appearance: | Physical state: Liquefied Compressed Gas | Molecular weight: Approx. 99.4 | Chemical Formula: CF₃CFH₂, CF₃CF₂H, CO₂ | Odor: Slight ether-like odor |
| Specific gravity (water = 1.0): 1.19 at 25°C (77 °F) | Solubility in water: 0.15%wt. @ 25°C (77°F), 1 atm (Based on primary component) | pH: Not applicable | Boiling point at 1 atm.: -26.1 °C (-15.0°F) (Based on primary component) | Gas density: Approx. 4.17 kg/m³ (0.265 lb./ft³) @ 77 °F, (25 °C) |
| Relative Density (Air=1): 3.6 | Partition coefficient, n-octanol/water, Log Pₜₐₓ: 2.0-2.8 | Auto-ignition temperature: Not determined | Upper flammability or explosive limits: Not applicable | Lower flammability or explosive limits: Not applicable |
| Vapor pressure: 1,437.5 kPa (208.5 psig) @ 25°C (77°F) | Vapor density: 4.17 kg/m³ (0.265 lb./ft³) @ 25°C (77°F), 1 atm | Evaporation Rate: Faster than water and ether | Flash Point: None | Liquid density: 1.19 kg/l (74.3 lb./ft³) @ 25°C (77°F) |

10. STABILITY AND REACTIVITY

Stability: Normally stable (will decompose if exposed to a high radiant heat source, such as fire). The material is intended for use as a fire extinguishant.

Incompatibilities: Incompatible with alkali or alkaline earth metals, and powdered metals Al, Zn, Be, etc. Avoid contact with oxidizers.

Hazardous Decomposition Products: Thermal decomposition may produce hydrogen fluoride and carbonyl halide. These materials are dangerous and exposure to them should be limited to the extent possible.

Hazardous Polymerization: Will not occur.
11. TOXICOLOGICAL INFORMATION

Toxic Properties of Components: Acute toxicity is low

For 1,1,1,2-Tetrafluoroethane (CAS # 811-97-2):

- Approximate Lethal Concentration (RAT, 4 hr.): Greater than 50% (v/v) (Inhalation)
- Cardiotoxic LOAEL (Lowest Observed Adverse Effect Level): 7.5% (v/v)
- Cardiotoxic NOAEL (No Observed Adverse Effect Level): 5.0% (v/v)

Toxicological testing was performed on HFC-134a by the Program for Alternative Fluorocarbon Toxicity Testing (PAFT). Data from acute toxicity studies in this program demonstrated that HFC-134a has very low toxicity by inhalation, is not a developmental toxicant, nor is it genotoxic.

Long-term exposure in a two-year study, at a concentration of 50% (v/v) produced an increase in late-life occurring benign testicular tumors, testicular hyperplasia and testicular weight. In this study, there was no effect at 10% (v/v).

Reproductive data on male mice showed no change in reproductive performance. There is no evidence of any genetic damage in bacterial or mammalian cell cultures, or in animals

For Pentafluoroethane (CAS # 354-33-6):

- Approximate Lethal Concentration (RAT, 4 hr.): Greater than 70% (v/v) with supplemental oxygen, (Inhalation)
- Cardiotoxic LOAEL (Lowest Observed Adverse Effect Level): 10% (v/v)
- Cardiotoxic NOAEL (No Observed Adverse Effect Level): 7.5% (v/v)

Toxicological testing was performed on HFC-125 by the Program for Alternative Fluorocarbon Toxicity Testing (PAFT). Data from acute toxicity studies in this program demonstrated that HFC-125 has very low toxicity by inhalation, is not a developmental toxicant, nor is it genotoxic.

In animal testing, this material has not caused developmental toxicity nor has it caused genetic damage in test subject bacterial or cell cultures. This material has not been tested for its ability to cause permanent genetic damage in reproductive cells or mammals.

For Carbon Dioxide (CAS # 124-38-9):

- Approximate Lethal Concentration: 17% (v/v) within 1 minute (inhalation)
- Unconsciousness: 7 to 10% (v/v) for longer than 3 minutes (Inhalation)
- Hearing and visual disturbances: 6% (v/v) for 1 to 2 minutes (inhalation)
- Headache, dizziness, increased blood pressure, uncomfortable dyspnea: 4 to 5% (v/v) for 5 to 10 minutes (inhalation)

Sustained inhalation of extremely high concentrations of the gas (10% or above) could cause unconsciousness or death.

Carcinogen: IARC: NO NTP: NO OSHA: NO

12. ECOLOGICAL INFORMATION

This material is a substitute for halon fire extinguishants (brominated CFCs). This material will not impact stratospheric ozone and has a lower global warming potential than the halon 1301 it is primarily intended to replace.

The material is a mixture of volatile organic compounds (although exempted from reporting as a VOC under U.S. regulation 40 CFR Part 51.100(s)) and should not be permitted to be mixed with ground or drinking water and should be handled, used, and disposed responsibly in accordance with regulations in the Country, Province, State, County, and locality where it is used.

13. DISPOSAL CONSIDERATIONS

Observe all federal, state, and local regulations for products of this type when accomplishing disposal.

The manufacturer assumes no liability for the use of this product in a manner that causes environmental or other harm.

It is recommended that DOT approved transport containers and carriers be used for shipment of this product.
15. REGULATORY INFORMATION

Toxic Substances Control Act (TSCA)
TSCA Inventory Status: All components Listed on the TSCA Inventory
Other TSCA Issues: None

**SARA TITLE III/CERCLA** "Reportable Quantities" (RQs) and/or "Threshold Planning Quantities" (TPQs) exist for the following ingredients. Listed only for Section 313 notification

**Section 313 Supplier Notification:** This material does NOT trigger Section 313 of Title III of the Superfund Amendments and Reauthorization Act of 1986. The materials are not listed on the Consolidated List of Chemicals Subject to the Emergency Planning and Community Right to Know Act and Section 112 (R) of the Clean Air Act.

Spills or releases resulting in the loss of any ingredient at or above its RQ (For those compounds where an RQ exists) require immediate notification to the National Response Center [(800) 424-8802], to the state where you are located, and to your Local Emergency Planning Committee or Fire Department.

**SARA 313 Toxic Chemicals:** The following ingredients are SARA 313 “Toxic Chemicals” and may be subject to annual reporting requirements. CAS numbers and weight percents are found in Section 2

<table>
<thead>
<tr>

Additional Regulatory Information:

**Regulations**
Listed in the Toxic Substances Control Act (TSCA) Inventory: Yes, all components are on the TSCA Inventory

Listed on EPA SARA (313) Hazard Class,
811-97-2 (1,1,1,2-Tetrafluorethane) and 124-38-9 (Carbon Dioxide) are listed in Canadian DSL

None of the chemical ingredients are classified in the Annex I of Directive 67/548/EEC, European Union

Information about limitation of use: This blend is intended solely for use as a fire-extinguishing agent and should not be used for other purposes without contact and technical discussion with the manufacturer

This preparation was classified in compliance with the following directives and regulations:
(EC) No 1907/2006 (REACH)
(EC) No 1272/2008 (CLP)
(EC) No 453/2010
